

DID YOU KNOW SALES TIPS

From **DSC**

8 New Power Series Features to make the security system more user friendly...

Auto Scroll Open Zones:

When a zone is violated, the keypad will automatically show the zone violated. If multiple zones are violated, the keypad will continuously scroll through the violated zones displaying each zone for 2 seconds.

- Keypad Section [*][076], enable option 8.

Quick Exit:

This feature allows the customer to let the dog out or answer the door while the system is armed without disarming. Press [*][0] or the Exit function button  while the system is armed. A delay zone can be violated and restored once for a max time of 2 min.

- Section [015], enable option 5.

Silent Troubles:

This feature will not beep the keypad and will only illuminate the Trouble LED  when a new system trouble is generated.

- Section [023], enable option 7.

Daylight Savings Time:

The control panel will automatically change the time and during the daylight saving and standard time switch. The date of the switch is also programmable the installer.

- Section [017], enable option 6.

Keypad Key Press Buffer:

When disarming the security system, pressing [#] when a key press error occurs is not required. Simply retype in the correct 4 or 6 digit code (don't listen to the error tone) and the system will disarm. For example, let say your code is [1234]. You type in [1][1], oops. Now just type in [2][3][4], (an error tone will be heard between the [3] and [4]) and the system will disarm.

- Feature is hard coded and is always enabled.

Door Chime Only on Entry:

Rather than having the keypad chime when a zone is violated **and** restored, the keypad can simply chime when the zone is violated or restored.

- Keypad Section [*][077], disable option 2.

Night Arming:

The system can now be armed in 3 modes:

 **Away:** All perimeter and interior zones are armed (i.e. no one is home)

 **Stay:** All perimeter zones are armed, and all interior zones are bypassed (i.e. your home at night moving around your house)

Night: All perimeter zones are armed, all night zones are bypassed (main level motions) and all stay/away zones are armed (basement and garage motions) (i.e. your sleeping)

Provide a DVD:

Why read an instruction manual when you can watch a 15 minute DVD on how to use your security system. Master DVDs can be provided to you. You can simply copy the DVD using any standard computer and distribute to your customers.
